

POCKETTRACKER

- ✓ Scan any ID card
- ✓ Retrieve photo and data
- ✓ Permit or deny entry
- ✓ Track attendance

Connects to any
ODBC Compliant
Database

POCKETTRACKER is the powerful, efficient, mobile, identity management tool that can meet any tracking and verification need. The POCKETTRACKER "Go Anywhere" Entry Access Management System was designed to be easy to use and highly user configurable, while it easily fits in the palm of your hand.

Besides validating individuals based on defined criteria, the system gathers and logs all activity (card swipes, look-ups, etc.) and creates a comprehensive audit file which can be instantly queried, stored for later use, combined with another event/activity log file, or even cross referenced with other databases to gather and analyze statistical and demographic data.

With POCKETTRACKER, you can increase security and safety, identify and allocate resources at peak periods, monitor and log attendance, enforce entry access policy, reward frequent participation, and the list goes on. There are so many uses and possibilities from this highly adaptable application that regardless of the environment or area of use, everyone can benefit from POCKETTRACKER.

FEATURES

- Multiple card reader options to accommodate most card types
- Manual Look-up via Last Name, ID number, Card number, etc.
- On-line, off-line, and wireless use
- Easy to configure
- Quick Count Feature keeps track of individuals already scanned in
- Multiple Events/Criteria can be stored for later use on one handheld
- Simple red/green visual displays and color photos
- Permit or deny entry based upon user defined field values
- Anti-passback on/off option for no re-entry
- In/Out buttons for basic attendance and counts
- User defined and password protected security levels
- All activity written to a statistics log for full audit and history
- Queries prepared for your reporting needs
- Ability to increment/decrement points

A standard POCKETTRACKER system comes with POCKETTRACKER software, a PocketPC handheld device and an ID card reader.

POINT, MAP, & GO!

The POCKETTRACKER Gateway allows a quick and easy connection to any existing ODBC compliant database.

Multiple Scanning Technologies

SYSTEM REQUIREMENTS

- Operates on most PocketPC handheld devices running PocketPC 2003 or later in a .NET environment
- Interfaces seamlessly with MS-SQL desktop, and required accompanying gateway/licensing utility allows for connection to any ODBC compliant database
- PC specifications for the one required gateway utility are those of minimum Windows requirements for the operating system as well as any specifics for the PocketPC device
